

FOR IMMEDIATE RELEASE: Tuesday, 7th November 2006

Aspects' new software functionality saves time and money for wireless test engineers

Aspects Software is announcing the launch of 3G and GSM Tools 5.2, the latest release of their leading suite of wireless testing tools, at Cartes 2006. The new tools complement Aspects' market leading test tool suite and will work in conjunction with their ultra-portable hardware platform, the SmartStation3S. The new functionality makes card and mobile handset acceptance testing faster and more effective, saving time and money for Network Operators, card manufacturers, mobile handset manufacturers and wireless test laboratories. A range of engineers, departments and companies working with GSM/3G cards or handsets can take advantage of the new functionality.

Release 5.2 of both 3G and GSM Tools enables engineers to improve and extend their testing capabilities between cards and handsets. The new functionality enhances the users' test experience by offering a range of new automation and partial automation features, making testing quicker and easier.

One of Aspects' unique features on the global testing market, Card Profile Validation, has been further enhanced to allow easier analysis of tested card profiles.

Similarly, one of the real strengths of Aspects' tools lie in their ability to facilitate test script development. This release offers a broader range of example scripts and applets, helping users' develop their own scripts more quickly.

Aspects' products are renowned for their usability. This latest release introduces hardware key licensing, making it easier for users to transfer the software between computers or test sites.

Finally, there are a range of new features relating to remote control, short cuts and translations which speed up and enhance users' ability to test.

Didier Sérodon, Aspects' CEO comments "Aspects, once again, has shown its commitment to the test engineering community by offering a broader range of functionality to work with our SmartStation3 hardware platform. Aspects' test tools are known throughout the testing community for their ease of use and with these additional test capabilities we believe we offer the most usable and beneficial suite of test and development tools on the market today".
